

The enterprise

3-Level Digital Readiness Model

1

Level 1: Data Standardization

Self-describing semantic data leveraging standards like RDF & OWL allow organizations to share meaningful information and automate understanding of heterogeneous data (Esperanto of data).

Level 2: Collaboration Automation

The international data space provides open standards for secure, self-determined sharing of and collaboration on data.

Level 3: Intelligence Automation

By establishing a shared language and communication platform, the International Data Space Association (IDSA) drives the deployment of intelligence automation.
